

KAVINDA GIMHAN

SOFTWARE ENGINEER

+94 76 883 1973 | kavindadarmasiri15@gmail.com | Polpelaketiya, Thalgaswala, Sri Lanka
[my-new-portfolio-v7u9.vercel.app](#)

PROFILE

Backend-focused Software Engineer with 3+ years building enterprise-grade systems for fintech, government, and e-commerce clients, including real-time fraud detection, workflow automation, and multi-tenant platforms. Specializes in Java/Spring Boot microservices and relational/NoSQL database design, with a track record of shipping scalable, secure features from architecture through production.

SKILLS

- Languages:** Java, TypeScript, JavaScript, HTML, CSS
- Frameworks & Libraries:** Spring Boot, Spring MVC, Spring Security, Java EE, Angular, React, Next.js, Node.js, Tailwind CSS
- Databases:** MySQL, PostgreSQL, Oracle, DB2, MongoDB, Redis
- Architecture & APIs:** Microservices Architecture, REST & SOAP APIs, JPA/Hibernate, JWT Authentication
- DevOps & Tools:** Docker, Jenkins, CI/CD Pipelines, GitHub, Jira, Maven
- Tools & IDEs:** IntelliJ IDEA, Visual Studio Code
- Core Competencies:** Software Development, Database Design, System Architecture, Agile/Scrum, Interpersonal Communication, Teamwork

WORK EXPERIENCE

- Software Engineer** – Epic Lanka Technologies 2025 – Present
- Design and develop robust backend features and microservice modules using Spring Boot, Java, and relational databases.
 - Architect full-stack platform components and manage end-to-end software integration workflows for technical scalability.
 - Collaborate across cross-functional engineering teams to oversee operational upgrades, security compliance, and product maintenance.
- Associate Software Developer** – Epic Lanka Technologies 2024 – 2025
- Developed, scaled, and optimized core functionalities for complex, proprietary workflow management systems.
 - Implemented software updates and maintained applications to ensure maximum system uptime and performance.
 - Collaborated closely with cross-functional development teams to deliver enterprise-grade fintech and e-commerce applications.
- Intern Software Engineer** – Epic Lanka Technologies 2022 – 2023
- Supported the engineering team in building and debugging features for large-scale government and private sector projects.
 - Participated in code reviews, database schema design, and technical troubleshooting sessions.

EDUCATION

- Bachelor of Science (Hons) in Software Engineering** – ESOF Metro Campus 2025 – 2026
- Graduate Diploma in Software Engineering (GDSE)** – Institute of Software Engineering (IISE) 2021 – 2023

LANGUAGES

Sinhala (Fluent) • English (Fluent)

PROJECTS

Doxmate Workflow

A comprehensive enterprise workflow management system designed to simplify and automate complex business operations. Developed key modular functionalities and engineered secure backend systems.

Technologies used: Java, Spring Boot, Angular, PostgreSQL, MongoDB, Hibernate, TypeScript, Microservices Architecture, Node.js

Ceylon Tea Board Application

A government enterprise application built for the national tea board authority to manage regulations, processing tracks, and distribution records. Implemented new system features and resolved critical legacy bugs to stabilize performance.

Technologies used: Java, Spring Boot, Angular, MySQL, TypeScript, Microservices Architecture, Node.js, Hibernate

Loyalty Management System

An enterprise e-commerce customer reward framework engineered to dynamically calculate, award, and track promotional points for product purchases across multi-tenant integrations.

Technologies used: TypeScript, Angular, Node.js, Spring Boot, Java, MySQL, Microservices Architecture, Hibernate

Fraud Management System

A high-security, low-latency financial evaluation platform built to analyze real-time Visa and Mastercard transactions for fraudulent signals, utilizing a dedicated rule-engine logic to instantly flag anomalies with reason codes.

Technologies used: Java, Spring Boot, MySQL, Microservices Architecture, Angular, TypeScript, Node.js, Hibernate

Travler Official Site

An enterprise platform engineered with a decoupled, multi-tier service architecture. Designed to handle dynamic corporate operations, services presentation, and reliable asynchronous communications.

Technologies used: Spring Boot, Spring Microservices, Angular, MySQL

369 Cloth E-Commerce Site

A modern, high-performance web storefront designed for clothing retail. Implemented responsive user experiences, static site generation optimized for SEO, and efficient query-driven shopping basket utilities.

Technologies used: Next.js, React, JavaScript, MySQL, Tailwind CSS

Travler Professional Portfolio

A lightweight, highly responsive single-page web platform engineered to showcase technical projects, modern UI workflows, and optimize client-side navigation paths.

Technologies used: Angular, TypeScript, HTML5, CSS3

StockMate

A robust, multi-tenant business and enterprise resource management system. Features a comprehensive Super Admin control center for tenant corporate onboarding, localized role-based access controls (RBAC), fine-grained inventory asset mapping, and granular administrative approval workflows.

Technologies used: Spring Boot, Angular, Java, TypeScript, MySQL, Spring Security JWT

Smart Bill Management System

An automated utility processing and billing platform engineered to track statements, compute consumption rates, and provide real-time transaction updates. Designed with role-based dashboard metrics for seamless administrative oversight and secure customer session handling.

Technologies used: Spring Boot, Angular, Java, TypeScript, MySQL, RESTful APIs
